OBJECTIVE

Senior Software Engineer with 5+ years of experience designing and delivering robust, scalable, architecture driven systems across backend, frontend, and cloud. Focused on full-stack development, software architecture, and AI-driven solutions, with a track record of shipping production grade products

EDUCATION

American University of Beirut | Beirut, Lebanon

- **M.E.** in Software and Networking, **CGPA:** 4/4
 - **B.E.** in Electrical and Computer Engineering, **CGPA:** 3.3/4
- Minor Degrees: Machine Learning, Mathematics.

September 2020 – July 2022

August 2016 – May 2020

WORK EXPERIENCE

Senior Software Engineer with SAUGO360 subcontracted to TELUS | TELUS, Canada

June 2021 – Present

- Designed and delivered a full-stack network management platform integrating UI, APIs, backend services, and physical network device configuration for large-scale deployments
- Architected scalable microservices with event-driven communication using RabbitMQ and Tornado, and implemented Elasticsearch-based observability to improve reliability and fault isolation
- Designed IoT device configurations and service models in Cisco NSO using YANG, applying modular, reusable architecture patterns to accelerate new service rollouts
- Automated network service provisioning and configuration workflows in Python, increasing deployment consistency and reducing manual effort
- Led the UI development team, defining best practices and ensuring timely delivery of maintainable, user-centric interfaces
- Managed GitLab-based source control and CI/CD pipelines, supporting frequent, low-risk releases and collaborative development

Full Stack Engineer | Self-employed

July 2022 – Present

- Designed and deployed advanced chatbots and intelligent systems using Retrieval-Augmented Generation (RAG) with LangChain, Pinecone, OpenAI and local LLMs, implementing autonomous multi-agent workflows for dynamic query resolution and customer support
- Built multi-format document ingestion and semantic search pipelines with a React/Next.js interface, enabling users to query domain knowledge with traceable, source-grounded responses
- Developed and optimized ML models for image-based prediction of street objects, distances, and related features to support computer-vision use cases
- Built a production-grade web application using Angular with a Node.js and MySQL backend, and led deployments on AWS (Elastic Beanstalk, S3, RDS, Lambda) to ensure scalable, reliable operation

Graduate Teaching Assistant | American University of Beirut, Lebanon

September 2020 – December 2021

- Supported course delivery by helping design and plan lectures, holding student support sessions, and coordinating with instructors to align content with learning objectives
- Prepared assignments, quizzes, and exams and maintained grading accuracy and fairness in line with course policies

Front-end Engineer | Ubanquity, Ireland

June 2020 – November 2020

Internship and part time front-end engineer | Intertech, Lebanon

June 2019 – October 2019

PROJECTS

Fintrack Pro – Cross-platform Fintech App | Side Project

September 2025 – Present

- Built a cross-platform portfolio tracking application (web and mobile) using autonomous multi-agent AI workflows orchestrated across Claude, Gemini, and other LLMs to deliver real-time positions, analytics dashboards, and personalized insights for traders and investors

MapDataHub.com – Geospatial Data Platform | Side Project

October 2024 – September 2025

- Built MapDataHub.com, a web platform for aggregating, visualizing, and querying geospatial datasets using Mapbox for interactive maps, Tegola for vector tile serving, an Angular frontend, and a Tornado-based backend API

Retrieval-Augmented Generation LLM | Side Project***September 2023 – November 2023***

- Built a Retrieval-Augmented Generation (RAG) system consisting of a user interface, server backend, and a database. This system enables the LLM to present accurate information with source attribution based on real-time data retrieval

Artificial Intelligence for Security of IoT Devices | M.E. Thesis***September 2020 – July 2022***

- Developed a ML model responsible for authenticating the transmitter at the receiver side in communication links. Used different ML models: Random Forest, Linear Regressor, KNN and Support Vector Machines.

PROFESSIONAL RELEVANT SKILLS

- Languages: English (fluent), French (intermediate), Arabic (native)
- Technical: JavaScript/TypeScript, Python, Git; HTML, CSS; Angular, React, Vue; MySQL, MongoDB, Elasticsearch; software architecture (microservices, distributed systems, API design and integration); Docker, OpenShift, AWS, CI/CD, Agile, DevOps; prompt engineering and building AI agents (RAG, multi-agent workflows, LLM orchestration across models such as Claude and Gemini)
- Soft skills: Communication, teamwork, technical leadership, presentations, reporting, time management
